Implementing, Managing, and Maintaining a Microsoft Windows Server 2003 Network Infrastructure: Network Services

This five-day instructor-led course provides students with the knowledge and skills to implement and manage a Microsoft® Windows® Server 2003 network infrastructure. The course is intended for systems administrator and systems engineer candidates who are responsible for implementing and managing server networking technologies. These tasks include implementing routing; implementing and managing Dynamic Host Configuration Protocol (DHCP), Domain Name System (DNS), and Windows Internet Name Service (WINS); securing Internet Protocol (IP) traffic with Internet Protocol security (IPSec) and certificates; configuring a network access infrastructure by configuring the connections for remote access clients, and managing and monitoring network access. This is the fourth course in the Systems Administrator and Systems Engineer track for Windows Server 2003, and it is the final course in the Systems Administrator track.

Audience

This course is intended for individuals who are employed as or seeking employment as a systems administrator or systems engineer.

At Course Completion

After completing this course, students will be able to:

- Install and configure routing by using the Routing and Remote Access service.
- Install and configure the DHCP Server service.
- Manage and monitor DHCP.
- Configure host and network basic input/output system (NetBIOS) name resolution.
- Install and configure the DNS Server service.
- Manage and monitor DNS.
- Install, configure, and manage WINS.
- Secure IP traffic by using IPSec and certificates.
- Implement a network access infrastructure by configuring the connections for virtual, dial-up, and wireless clients.
- Manage and monitor remote connections in a network access infrastructure.

Prerequisites

Before attending this course, students must have:

- Completed Course 2276, *Implementing a Microsoft Windows Server 2003 Network Infrastructure: Network Hosts*, or have equivalent knowledge and skills.

Student Materials

The student kit includes a comprehensive workbook and other necessary materials for this

class.

Course Outline

Module 1: Allocating IP Addressing by Using Dynamic Host Configuration Protocol (DHCP)

This module provides you with the knowledge and skills to allocate IP addressing in a network environment.

Lessons

- Multimedia: The Role of DHCP in the Network Infrastructure
- Adding and Authorizing a DHCP Server Service
- Configuring a DHCP Scope
- Configuring DHCP Reservations and Options
- Configuring a DHCP Relay Agent

Lab A: Identifying and Resolving Common Issues When Allocating IP Addressing by Using DHCP

- Identifying and Resolving Common Issues When Allocating IP Addressing by Using DHCP

After completing this module, students will be able to:

- Describe the role of DHCP in the network infrastructure.
- Add and authorize a DHCP Server service.
- Configure a DHCP scope.
- Configure DHCP reservations and options.
- Configure a DHCP relay agent.

Module 2: Managing and Monitoring Dynamic Host Configuration Protocol (DHCP)

This module provides you with the knowledge and skills to manage the DHCP service to reflect changing client IP addressing needs. It also provides you with the knowledge and skills to monitor DHCP server performance, because the DHCP environment is dynamic.

Lessons

Course Specifications

Implementing,
Managing, and
Maintaining a Microsoft
Windows Server 2003
Network Infrastructure:
Network Services

Course number: 2277

Course length: 5 days

- Managing a DHCP Database
- Monitoring DHCP
- Applying Security Guidelines for DHCP

Lab A: Managing and Monitoring DHCP

- Managing and Monitoring DHCP

After completing this module, students will be able to:

- Manage a DHCP database.
- Monitor DHCP.
- Apply security guidelines for DHCP.

Module 3: Resolving Names

This module provides you with the knowledge and skills to assign computer names to the IP addresses of the source and destination hosts, and then use the computer name to contact the hosts.

Lessons

- Multimedia: Introduction to the Name Resolution Process
- Viewing Names on a Client
- Configuring Host Name Resolution
- Configuring NetBIOS Name Resolution

Lab A: Resolving Names

- Troubleshooting Name Resolution

After completing this module, students will be able to:

- Describe the name resolution process.
- View names on a client.
- Configure host name resolution.
- Configure NetBIOS name resolution.

Module 4: Resolving Host Names by Using Domain Name System (DNS)

This module provides you with the knowledge and skills to resolve host names by using Domain Name System.

Lessons

- Multimedia: The Role of DNS in the Network Infrastructure
- Installing the DNS Server Service
- Configuring the DNS Server Service
- Configuring the DNS Zones
- Configuring DNS Zone Transfers
- Configuring a DNS Client

Lab A: Resolving Host Names by Using Domain Name System

- Implementing a DNS Infrastructure

After completing this module, students will be able to:

- Describe the role of DNS in the network infrastructure.
- Install the DNS Server service.
- Configure the DNS Server service.
- Configure the DNS zones.
- Configure DNS zone transfers.
- Configure a DNS client.

Module 5: Integrating Domain Name System and Active Directory

This module provides you with the ability to manage integration between Active Directory® directory service and Domain Name System (DNS).

Lessons

- Configuring Active Directory Integrated Zones
- Configuring DNS Dynamic Updates
- Understanding How Active Directory Uses DNS

Lab A: Integrating DNS and Active Directory

- Configuring Active Directory Integrated DNS Zones

After completing this module, students will be able to:

- Describe how Active Directory integrated zones function.
- Configure DNS to support dynamic updates.
- Explain how Active Directory uses DNS.

Module 6: Managing and Monitoring Domain Name System (DNS)

This module provides you with the knowledge and skills to manage and monitor DNS servers to ensure that they are functioning properly and to optimize network performance.

Lessons

- Managing DNS Records
- Testing the DNS Server Configuration
- Monitoring DNS Server Performance

Lab A: Managing and Monitoring DNS

- Managing and Monitoring DNS

After completing this module, students will be able to:

- Manage the properties of DNS records.
- Test DNS server configuration.
- Monitor DNS server performance.

Module 7: Resolving NetBIOS Names by Using Windows Internet Name Service (WINS)

This module provides you with the knowledge and skills to use WINS to register NetBIOS names and resolve them to IP addresses.

Lessons

- Multimedia: The Role of WINS in the Network Infrastructure
- Installing and Configuring a WINS Server
- Managing Records in WINS
- Configuring WINS Replication
- Managing the WINS database

After completing this module, students will be able to:

- Describe the role of WINS in the network infrastructure.
- Install and configure a WINS server.
- Manage records in WINS.
- Configure WINS replication.
- Manage a WINS database.

Course length: 5 days

Module 8: Configuring Routing by Using Routing and Remote Access

This module provides you with the knowledge and skills to configure a routing solution for your network environment.

Lessons

- Multimedia: The Role of Routing in the Network Infrastructure
- Enabling and Configuring the Routing and Remote Access Service
- Configuring Packet Filters

Lab A: Configuring Routing by Using Routing and Remote Access

- Configure Routing and Remote Access
- Plan a Routing Topology

After completing this module, students will be able to:

- Describe the role of routing in the network infrastructure.
- Enable and configure the Routing and Remote Access service.
- Configure packet filters.

Module 9: Securing Network Traffic by Using IPSec and Certificates

This module provides you with the knowledge and skills to secure network traffic and to use certificates with IPSec for increased security.

Lessons

- Implementing IPSec
- Understanding IPSec Deployment Scenarios
- Monitoring IPSec

After completing this module, students will be able to:

- Implement IPSec.
- Understand IPSec deployment scenarios.
- Monitor IPSec.

Module 10: Configuring Network Access

This module provides you with the knowledge and skills to configure a server with the Routing and Remote Access service, create appropriate remote access connections on a network access server, and configure users' access rights.

Lessons

- Introduction to a Network Access Infrastructure
- Configuring VPN Access
- Configuring Dial-up Access
- Configuring Wireless Access
- Controlling User Access to a Network
- Centralizing Network Access Authentication by Using IAS
- Protecting Remote Access by Using Network Access Quarantine

After completing this module, students will be able to:

- Describe a network access infrastructure.
- Configure a virtual private network (VPN) connection.
- Configure a dial-up connection.
- Configure a wireless connection.
- Control remote user access to a network.
- Centralize authentication and policy management for network access by using IAS.
- Control remote access to your network by using Network Access Quarantine.

Module 11: Managing and Monitoring Network Access

This module provides you with the knowledge and skills to manage and monitor network access.

Lessons

- Managing the Network Access Services
- Configuring Logging on a Network Access Server
- Collecting and Monitoring Network Access Data

Lab A: Managing and Monitoring Remote Access

- Monitoring a Remote Access Server
